

Retail Sales Power BI Dashboard

Professional Business Intelligence & Sales Analytics Project Report

Prepared By

Rushitha A S Galidevara

Power BI Portfolio Project

2026

1. Project Overview

The Retail Sales Power BI Dashboard project was developed to analyze retail business performance through interactive visualizations and business intelligence techniques. The dashboard provides insights into sales trends, profitability, customer segments, regional performance, and product analysis to support operational and strategic decision-making.

2. Project Objectives

- Analyze retail sales and profitability trends.
- Monitor business KPIs using interactive dashboards.
- Identify top-performing products and regions.
- Visualize customer segment contributions.
- Create a professional business intelligence solution.

3. Dashboard Features

- KPI cards for Total Sales, Profit, Orders, and Discounts.
- Monthly Sales Trend Analysis.
- Profit by Category Visualization.
- Regional Sales Performance Analysis.
- Customer Segment Analysis.
- Top Product Analysis Dashboard.
- Interactive slicers and filters.

4. Tools & Technologies Used

Tool / Technology	Purpose
Power BI	Dashboard development and interactive visualization
CSV Dataset	Retail sales data source
Business Intelligence	Data analysis and business reporting
Data Visualization	Trend analysis and insight presentation

5. Skills Demonstrated

- Dashboard Development
- Business Analytics
- KPI Reporting
- Data Visualization
- Sales Analytics
- Trend Analysis
- Interactive Filtering and Slicers

6. Key Insights

The dashboard identified high-performing product categories and regional sales trends while providing valuable insights into customer segments and product performance. Interactive filtering enabled efficient analysis across multiple dimensions and improved business visibility.

7. Conclusion

The Retail Sales Power BI Dashboard project demonstrates practical business intelligence and data visualization skills using Power BI. The project successfully transformed retail sales data into actionable business insights through interactive visualizations and KPI-driven analysis. This project highlights analytical thinking, dashboard development capabilities, and professional reporting skills applicable to finance, business analytics, and operations-focused roles.
